### HOW TO REPLY TO THIS NOTICE:

#### I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

**DETAILED ACTION**

***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-13 and 15-17, drawn to an electron beam interferometer.

Group II, claim(s) 14, drawn to an optical interferometer.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: electron optics and light optics comprise fundamentally different components operating under fundamentally different principles. An example particular to this case is an electron biprism, which comprises electrodes, as compared to an optical biprism, which comprises refractive material. Thus all technical features of groups I and II are completely different in their structure and mode of operation (thus requiring a different field of search), even if the geometry imparted to their respective beams is the same.

3. During a telephone conversation with Harold Burnam on 01/15/2009 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-13 and 15-17. Affirmation of this election must be made by applicant in

Art Unit: 2881

replying to this Office action. Claim 14 withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

4. This application is in condition for allowance except for the presence of claim 14 directed to the invention of Group II non-elected without traverse. Accordingly, claim 14 been cancelled.

#### **EXAMINER'S AMENDMENT**

5. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Harold Burnam on 01/16/2009.

The application has been amended as follows:

In claim 1, line 8, after "an upper stage biprism" add "comprising one or more electrodes"

In claim 1, line 12, after "a lower stage biprism" add "comprising one or more electrodes"

In claim 1, line 14, after "plural lenses" add "of the lens system"

In claim 1, line 15, after "moving and rotating the" add "one or more"

6. This amendment resolves formal matters relating to definiteness and antecedent basis of claim terms.

***Allowable Subject Matter***

7. Claims 1-13 and 15-17 allowed.

8. The following is an examiner's statement of reasons for allowance: The prior art does not teach "an upper stage biprism comprising one or more electrodes provided on a plane perpendicular to an optical axis and at a position of an image plane of the specimen, the image plane formed on the downstream side of the position of the specimen in the traveling direction of the electron beam on the optical axis; and a lower stage biprism comprising one or more electrodes provided on the downstream side of the position of the upper stage biprism in the traveling direction of the electron beam via one of the lens or the plural lenses of the lens system and on a plane parallel to the upper biprism; wherein each of the two biprisms is capable of moving and rotating the one or more electrodes independently, and applying a voltage independently to deflect an electron beam in one electro-optic plane including the optical axis."

9. Matsui (U.S. Patent 5,466,548) discloses an apparatus for forming an interference pattern with an electron beam using two biprisms (103), but does not teach that the lower biprism is downstream of the upper biprism in the traveling direction of the electron beam *via one of the lens or the plural lenses of the lens system*. Fig. 2 of the present invention shows an exemplary embodiment of the invention of claim 1, wherein a lens (33) of the lens system is located between the upper biprism (9u) and the lower biprism (9b); thus, the lower biprism downstream of the upper biprism in the traveling direction of the electron beam via one of the lens of the lens system as in the claim.

Matsui's apparatus is constructed with the biprisms very close together, and

Art Unit: 2881

“integrated as a unit” (claim 1). There is simply no room for the addition of a lens between the two biprisms in Matsui’s apparatus, and to also take into account the focal length of said lens. Further, since an electron lens necessarily involves electric or magnetic fields, these fields would interfere with the electric field operation of Matsui’s closely situated biprisms. The modification of Matsui’s apparatus to include a lens between the biprisms can therefore not be considered simply a routine exercise in ordinary skill.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
